

TEST AUTHORIZING BACKLOG

The following captures the known outstanding issues remaining for Test Authoring as of 29-Feb-2016. The schedule for completion of the backlog is not determined. Please note that the inclusion of these items does not guarantee eventual completion.

1. **Permissions:** There are some minor security model/permission issues associated with Test Authoring. These are manifested when a user logs in with a role associated with an unlikely combination of permissions (for example, a MODIFY permission without a READ permission). The workaround is to use normal, predefined roles such as Test Author or Test Authoring Administrator, each of which have all appropriate permissions set up.

Key	Summary
SB-1106	TA: Blueprints Read and Blueprints Modify have same level of Permission
SB-1103	TA: Test Read and Test Modify in Permissions grant the user same level of permission in TA
SB-1104	TA: Test Segments and Scoring have incorrect display when given certain permissions
SB-1107	TA: User is able to create new Performance levels without appropriate permissions

Table 1: Known Permission Issues

2. **Functionality:** There are various technical tasks that were not considered critical to required functionality. These tasks have been noted during internal tracking and all have reasonable workarounds.

Key	Summary
SB-249	Not able to select enemy list items in Internet Explorer 11
SB-35	TA: Cannot upload psychometric info for a test that has not been published
SB-94	Sorting of the columns is not consistent
SB-882	TA: Textboxes with typing tips have inconsistent functionality
SB-914	TA: Computation Rules (Settings): The reorder option does not work when more than one parameters are added to a new computation rule
SB-1466	TA: XML: Segment Unique ID should be different in different versions of the test for multisegment tests

Table 2: Known Functionality Issues

3. Cosmetic: These represent minor user interface issues in Test Authoring which do not affect the functionality of the application. Examples include improving the appearance of error messages, Browser icon configuration, Dimming of certain text under certain conditions, etc. Often these issues are inconsequential and/or have a reasonable workaround.

Key	Summary
SB-12	Settings: Algorithm Type dropdown on ISA search screen should have selection "Any" instead of an empty string
SB-14	Settings: ISA: Inconsistent add and reorder labels
SB-16	TA: After selecting a Settings option, that option's text becomes invisible
SB-21	Blueprints: Hints window does not retain its size
SB-25	Blueprints: While editing, all search options should be grayed out
SB-29	Item groups in Item pools do not show all error messages
SB-55	TA application shows a Apache Tomcat logo on the browser tab
SB-162	TA: Scoring page does not have valid error messages
SB-274	Test Authoring: Slide to view test-creation option has text alignment issue
SB-368	TA: Blueprint: Inconsistent size of columns

Test Authoring Backlog

SB-424	TA: Manage Standard Publication: User is not able to sort columns like Tenant/Subjects
SB-425	TA: Item Selection Algorithm: Parameter Details: Type: Drop Down Link border is cutting off
SB-868	Test Authoring: Standards Publications: Publisher drop down shows all publishers including the ones that do not have Subjects or Publications.
SB-879	Test Authoring: Blueprints: Top scroll bar for table is not clearly visible for blueprints with more parameters
SB-945	Test Authoring: A small square appears when you click on any section (only in Chrome)
SB-954	TA: Forms: Items: Item search by grade is working inconsistently
SB-1444	TA: Performance Levels: Move icon is cut off in Chrome
SB-238	Resizing window makes the display look bad
SB-427	TA: Computation Rule: Parameter: Blue Alert message is cut off
SB-740	TA: Performance Levels: Unwanted error message displayed for performance level field validations
SB-815	TA: Segment Pools: Enemy List: Item Search inconsistency
SB-881	TA-PM: Tenant name has no restrictions and are not available for selection in Settings
SB-883	TA: Test Segments: Change of ISA validation message
SB-1109	TA: Forms: Reorder page displays "Save Reorder" and "Cancel" buttons twice
SB-1445	TA: Forms: Forms: "Required" validation is missing for Language field
SB-1465	TA: Master Item Pool: Affinity Group Summary: Search button is not needed
SB-1464	TA: Blueprints: Affinity groups: column names overlap each other
SB-1447	TA: Blueprints: Unknown application error for new test in some cases.
SB-276	"Slide to view Post-Test Creation Options" disappears when viewport is reduced to 1,000 pixels wide or less
SB-244	Parameter Icons in Item Selection Algorithms are slightly being cut off in Internet Explorer 11
SB-59	TA: Item Pools: Enemy list: Second dropdown should not include the option selected in the first dropdown
SB-53	Hovering over the MENU tab displays javascript(void) in status bar

Test Authoring Backlog

SB-715	Form label tags are not associated with valid Form input controls
